

ARE YOU CARING FOR A PERSON WITH MEMORY LOSS?

***WOULD YOU LIKE MORE HELP IN CARING FOR THIS PERSON
WITH MEMORY LOSS?***

***YOU MAY BE ELIGIBLE TO PARTICIPATE IN A NEW STUDY
AT THE UNIVERSITY OF MINNESOTA!***

- *What:* We are examining the efficacy of a remote health monitoring system, called the “eNeighbor.” This project is funded by the Agency for Healthcare Research & Quality (HS022836-01). Dr. Joseph E. Gaugler, University of Minnesota School of Nursing and Center on Aging, is the Principal Investigator of this project.
- *For Whom?* Family, partner, or a friend who is a caregiver of a person with memory loss.
- *When:* We will ask caregivers to participate for an 18-month period. Family members are asked to complete interviews/surveys and a checklist initially and every 6 months thereafter for 18 months. These interviews/surveys will take about 45-60 minutes to complete. We will also ask a select group of caregivers to complete a 60 minute interview 1 month after completion of their final 18 month interview/survey.
- *Where:* At a place of the caregiver’s choosing.
- *Why:* While the promise of remote health monitoring in a person’s home may provide significant support to caregivers of persons with memory loss, whether these innovative technologies work or not remains an open question.
- *Incentives:* Free use of the eNeighbor system for 1.5 years if you are randomly assigned to use the technology; if you are not selected to use the technology, we will provide this technology to you for free over an 18 month period on a first-come, first serve basis at the conclusion of the project.
